

A deterministic gate holds injected actions at zero — in a regime with no ASR headroom left

The gate: (class $\times$ arg-taint) $\rightarrow$ allow / deny

	provenance $\rightarrow$ clean arg	tainted arg
READ_ONLY	ALLOW	ALLOW
WRITE_LOCAL	ALLOW	DENY
IRREVERSIBLE	ALLOW	DENY
EXFIL_SHAPED	ALLOW	DENY

$\leftarrow$ 2 live gate denials
(injected privileged
tainted calls)

value-blind, no LLM — holds env-state ASR = 0 by construction
