

A deterministic gate holds injected actions at zero — in a regime with no ASR headroom left

Undefended ASR = 0 across the grid

The gate: (class $\times$ arg-taint) $\rightarrow$ allow / deny

	provenance $\rightarrow$ clean arg	tainted arg
READ_ONLY	ALLOW	ALLOW
WRITE_LOCAL	ALLOW	ALLOW
IRREVERSIBLE	ALLOW	DENY <i>injected calls denied liv</i>
EXFIL_SHAPED	ALLOW	DENY <i>injected calls denied liv</i>

value-blind, no LLM — holds env-state ASR = 0 by construction
